

**SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR
OBTAINING INFORMATION IN AN INFORMATION EXCHANGE
FRAMEWORK**

5

ABSTRACT

A system, method and computer program product are disclosed for obtaining information in an information exchange framework. A request is received via a network from a third party for information about a subject. The request includes an identifier associated with the subject. The received identifier is then utilized to identify the subject and based on the received identifier, the third party's right to access information about the subject is determined. The network is then utilized to provide the third party with information about the subject that the third party is determined to have a right to access.
